XL WIDTH.
XL PERFORMANCE.

FieldTurf

360XL

XL WIDTH. XL PERFORMANCE.

Increased thickness. Increased durability. Athlete Friendly. Beautiful looking. Our very own fibre engineers have done it again. We've taken our successful FieldTurf 360 yarn and made it even better – increasing its thickness and width – giving it a 15,600 dtex.

The application of the FieldTurf-exclusive **PPG concept** (Polymer, Process, Geometry) for the conception and extrusion of this new yarn – using a very high quality polymer – allows FieldTurf to offer an **extremely durable** monofilament fibre, improving both density and aesthetics. It's a perfect combination of **softness** and **resilience**, providing unmatched play conditions for the long run.

Artificial turf at its finest

When designing our new fibres, we use the best available material and equipment in the industry. With FieldTurf 360XL, the result is a 100%-PE fibre made up from a unique polymer specifically designed for artificial turf, that gets its unequalled properties from extremely well designed molecular chains. Our fibre is also treated with additional UV and antioxidant pigments that help reduce the yarns surface temperature for improved player comfort.

Long lasting fibre

Our 360XL yarn uses the best polymer available in the industry. Its 360 µ-thick-diamondshape geometry provides an unmatched durability. When tested on a Lisport wear machine, 360XL yarns can remain intact after 180 000 cycles (over 30 years simulated wear) while many other products available in the industry can't stand the comparison and still meets the standards of FIFA 1 star system after 40 000 Lisport cycles.

State-of-the-art resilience

Worried about ball roll and long term sporting performance? We've got the solution – our most resilient fibre yet. It's soft and comfortable for the athlete, but also ideal for long term ball roll and longevity. The 360thickness combined with the 1.3mm width is the ultimate combination for player and facility manager.

Stunning look

Our new FieldTurf 360XL yarn will give to your field a beautiful and natural grass-like look thanks to its geometry, as well as reduced infill dispersion. The yarn is also anti-glare for improved TV coverage and viewing experience.

FIELDTURF, A FIFA PREFERRED PRODUCER

The aim of the FIFA quality concept for artificial turf systems is to implement and oversee industrial standards for the production and installation of artificial turf surfaces throughout the world. Its network of preferred producers also guarantees artificial turf surfaces always meet the most stringent quality, performance and safety standards in compliance with the final users' needs.
